SPSS: Committed to Accessibility for All Users

In the more than 30 years that SPSS has created software products, the world of information technology has changed immeasurably, bringing the power of technology to an increasingly greater percentage of the population. Section 508 opens the door even further, to promote equal access to technology for those with disabilities.

SPSS understands the importance of Section 508 and we are committed to developing products that are accessible and effective for the greatest possible number of users. While this commitment is in part good business strategy, it also reflects our belief that features designed to increase ease-of-use for a particular user group provide additional benefit for all customers.

SPSS believes that our products reflect our commitment to universal usability. As a leader and innovator in the software field, SPSS is demonstrating its commitment to accessibility with the following steps and practices.

- Promote internal innovation in improving product accessibility
- Continuously review all products to identify and enhance accessibility features for all users with disabilities
- Monitor accessibility innovations throughout the software industry and educate SPSS development staff on new discoveries and practices
- Work toward meeting the requirements set forth in Section 508

SPSS is deeply committed to ensuring that each of our products is an effective, accessible technological tool for all users. We are dedicated to making the incredible opportunities provided by our technology available to everyone, in the belief that involvement and input from all user populations is the surest way to future technological advancements. SPSS believes that accessible products are well-designed products and benefit all users.
