

PES: PES AND SPSS

Platform: Windows

Duration: 2 – 3 Hours

SPSS

Target Audience

Users of the SPSS client application who are new to the Predictive Enterprise Services environment. Those users who need to be able to access files and automate SPSS jobs using the Predictive Enterprise Manager.

Prerequisites

Predictive Enterprise Services: Overview & PEM Tour is required. Experience with the SPSS client application. Introduction to SPSS would be beneficial.

Overview

This course covers the integration points between the SPSS client application and Predictive Enterprise Services through the use of the native PES SPSS adapter. We will show how SPSS interacts with Predictive Enterprise Services for storing, retrieving and controlling SPSS assets and artifacts. The course also explains how to create and run SPSS jobs and manage SPSS output from within the Predictive Enterprise Manager.
